

New Factory Certified Pre-Owned Transparent Cables

Transparent now offers a Factory Certified Pre-Owned Transparent Cable Program through Authorized Transparent Dealers. Customers who want to purchase pre-owned Super, Ultra, Reference, Reference XL, Reference MM, or OPUS level Transparent Cables can now do so with full confidence of the vintage and condition of the cables they buy. Transparent Certified Pre-Owned Cables have been thoroughly inspected, repaired, brought up to specification, and have new packaging and a new warranty card. Other than normal signs of wear and tear, Transparent's pre-owned cables are as good as new. They provide a great opportunity for some customers to fulfill a dream to own and experience Transparent Reference level cables in their own homes.

An important technical note: If they are to perform up to full specifications, Reference Series Cables or above require factory calibration to the system layout and the electrical characteristics of each associated component. Only buying new or Certified Pre-Owned Transparent from an Authorized Transparent Dealer insures that the cable is made for the system and will perform at its best.

Only registered Certified Pre-Owned and original owner Transparent Cables are eligible for the Transparent Upgrade Program.
