

TRANSPARENT

Transparent's PowerIsolator 8 and Reference Cables Win Big at AudioVideoRevolution.com

Only a few products selected to represent the best of the best.

PowerIsolator 8 chosen for Gear We Love 2006

After nearly a decade of annual AVR "Top 100" awards (Transparent has been a winner several times) 2006 sees a far smaller group of components selected to represent the best of the best. Transparent's **PowerIsolator 8** was chosen as one of only 41 examples of **Gear We Love 2006**.

The PowerIsolator 8 provides noise isolation and fail-safe surge protection for up to 8 components, creating noticeable improvements in both music and video playback. AVR raved about the PI8:

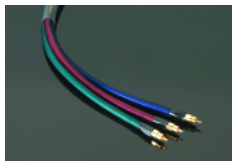

"... the finest-sounding AC power product that I have heard to date."

"With the PI8 in place ... [I saw] improvements to the edge detail, making images look much more 3D ... black levels were improved ... colors were perhaps the most improved ... **if you own an expensive video device, it deserves this level of improvement.**"

Reference Cables named to Hall of Fame

AVR's Hall of Fame sets apart products that have enduring value and performance. Publisher Jerry Del Colliano on this newly-created Hall of Fame: "This is for the ultra-upper-crust equipment that is so good, so great of a value that we feel the world needs to hear all about it."

Transparent's **Reference Audio and Video Cables** were named among only 36 products selected for the **Hall of Fame**. AVR's Bryan Southard commented,

"AudioRevolution.com has a policy of not subjectively reviewing cables, so I have yet to have any opportunity to publicly share my feelings on this particular system component. ...

The Transparent Reference cables are my choice without question.
