

## Transparent's MM2 Technology Cables Selected for CEPro Magazine's 14 Must-Have Products from 2008

### 14 Must-Have Products from 2008

by Robert Archer

12.05.2008 — Some say hindsight is 20/20. And maybe they're right when it comes to appraising the usefulness of consumer electronics.

It's certainly a lot easier to look back and evaluate this year's new products than it is to project what 2009 products will impact customer installers.

There were a lot of good products introduced in 2008 at shows like CES, EHX and CEDIA, but it's nearly impossible to see them all.

CE Pro, however, was able to see a sizable portion of the products by attending shows, meeting with companies or visiting installers in the field.

The following are the best products we either reviewed or had demoed to us throughout the year.

#### Editor's Picks: 14 Must-Have Products From 2008

CE Pro editor Bob Archer rounds up the best products he saw demoed or reviewed from 2008.

#### Transparent Audio MM2 Technology

Even though it's not a product, Transparent's MM2 technology is the latest version of the company's noise filtration technology.

It's available throughout the company's line of audio cabling, including its flagship Opus products, and provides greater detail enhancement, noise floor performance and dynamics.
